WHO ARE WE

Arqami Smart Technology Company, a leading technology company specializing in point-of-sale systems and devices, aims for progress, strives for permanent development and innovation, thinks beyond the near future to transcend it, and provides smart solutions and services in the field of point-of-sale management and its devices, among other things that fall under this field. Thus, we have contributed to the digital transformation locally and regionally, and we seek to be among the regionally leading companies in the field of smart technology.

OUR STORY

Early in 2006 Since its founding, Arqami has made it its mission to supply the Saudi market with integrated smart technology solutions, and it is currently working to expand this industry. In the beginning, Arqami was a business that focused on point-of-sale management solutions for retail establishments, cafes, and restaurants. Additionally, as an advisory firm for smart technologies.

OUR MISSION

Providing smart technology solutions to institutions and companies specialized in the field of hospitality, such as restaurants, cafes and retail stores; to improve the performance of its branches and departments and obtain the best financial returns using smart technology, and to ensure that you are always at the top, Arqami technical team will remain at your service around the clock.

OUR VISION

Our vision to become a global technology leader in the POS systems sector aligns with Saudi Vision 2030's goal of transforming the region into a thriving, innovative economy.

We contribute to this transformation by being a key hub for local, Gulf, and Arab POS systems, driving economic growth and innovation.

OUR VALUES

ARQAM I ERP system in a restaurant creates value by streamlining operations, improving inventory management, enhancing financial management, optimizing customer relationship management, enabling data-driven decision making, enhancing communication and collaboration, and ensuring compliance and risk management.

ABOUT SAAS

WHAT IS A SAAS PRODUCT?

SaaS (Software as a Service) is a software delivery model where applications are hosted by a provider and accessed over the internet. This eliminates the need for installation and maintenance on individual devices.

Key Features of SaaS

Accessibility: Access from any device with an internet connection.

Scalability: Easily scales based on user needs.

Automatic Updates: Providers handle updates and maintenance.

Subscription-Based Pricing: Typically monthly or annual fees.

Multi-Tenancy: Single software instance serves multiple customers securely.

Advantages

Cost-Effective: Low initial cost and reduced IT expenses.

Ease of Use: User-friendly interfaces with minimal training needed.

Rapid Deployment: Quick to deploy and start using.

Integration: Easily integrates with other software.

Maintenance-Free: Provider handles all maintenance and updates.

Common Use Cases

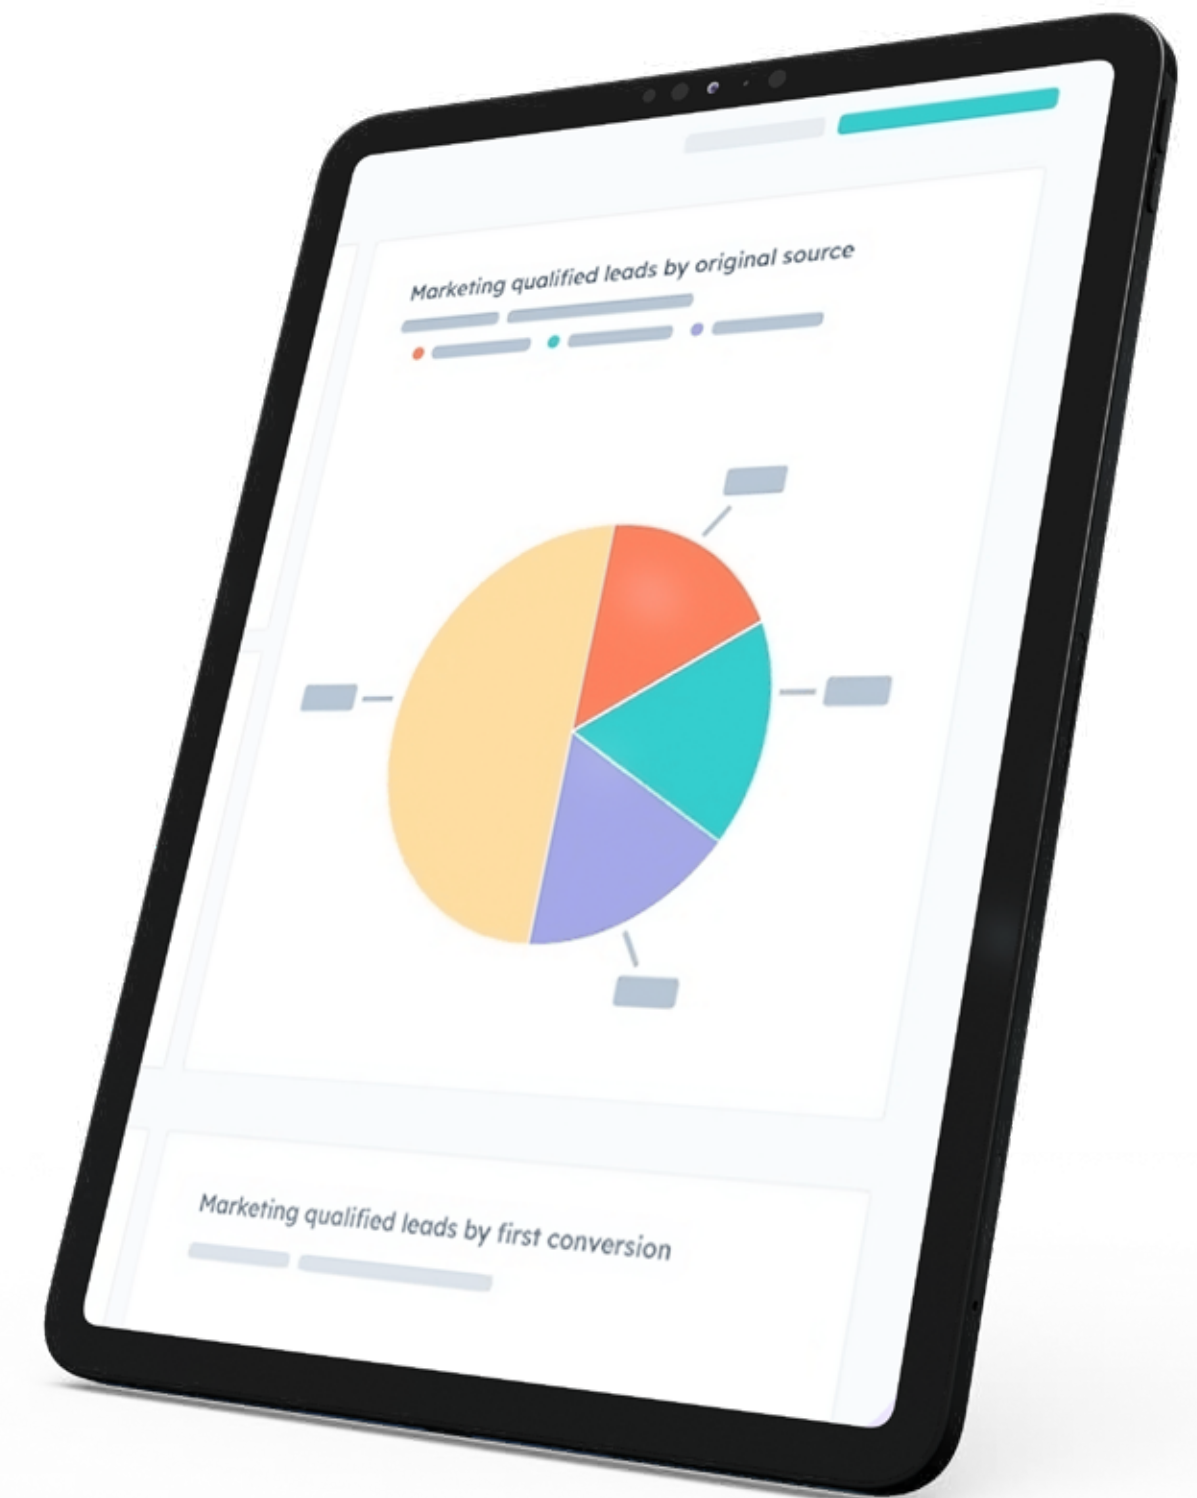

CRM: Tools like Salesforce and HubSpot.

ERP: Solutions like NetSuite.

HRM: Software like Workday and BambooHR.

Collaboration: Platforms like Slack, Microsoft Teams, and Zoom.

Project Management: Applications like Asana and Trello.

POINT OF SALES(POS)

OPOS by Arqami is suitable for restaurants, fast food, sweets, and other hospitality businesses. It's very simple and easy to use, with many users approved by ZATCA.

Reliability and security for users by using multiple ways to log in:

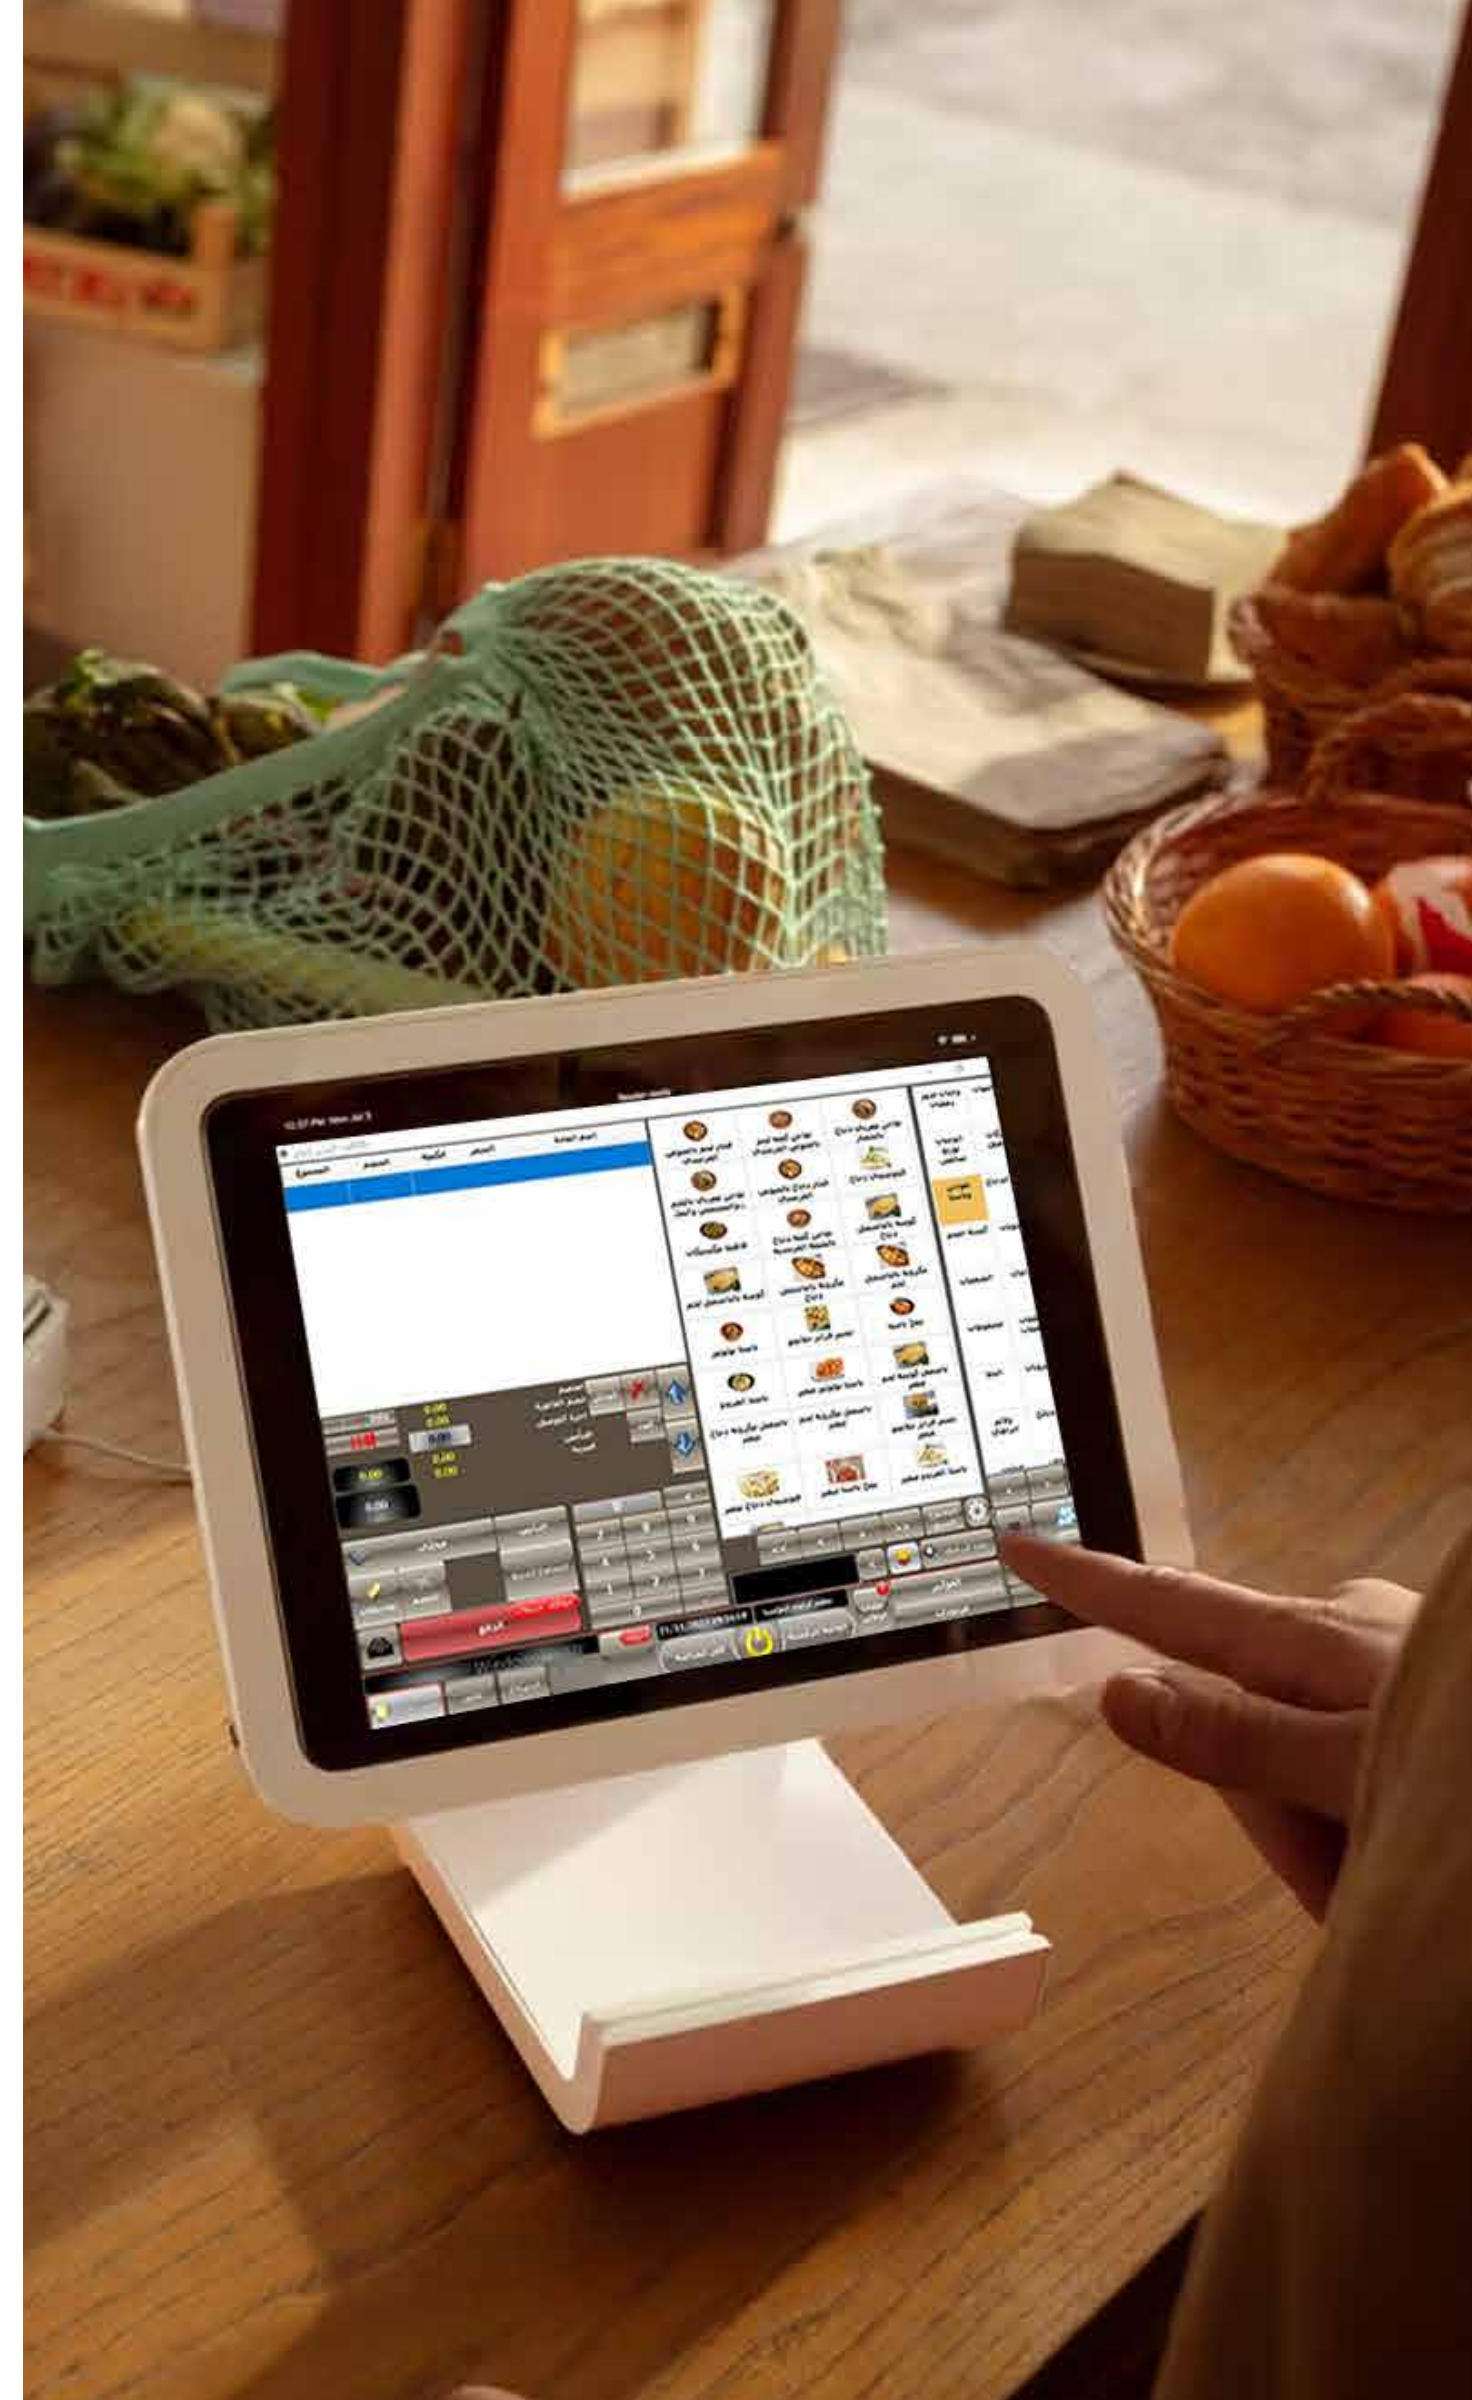

Through Username/Password method

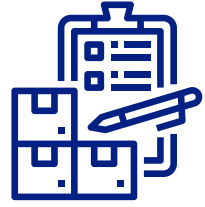

Through Fingerprint

Through OTP Authentication

Through Card Reader

The OPOS ordering screen is designed to enable the user to finish the invoice in a short time with minimal effort. Also, the user can make all types of invoices, like delivery invoices, takeaway invoices, behest invoices, table management, and reserve orders.

INVENTORY ORDER MANAGEMENT

through the inventory system, you can transfer items between different branches and warehouses:

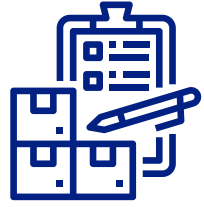

- ✓ items ordered
- ✓ items transfer
- ✓ transfer, receive

The system also contains support operations such as sorting items and a group of other operations.

Arqami's OPOS is designed to empower businesses like yours, providing a robust and comprehensive solution to manage your inventory and streamline your operations.

The screenshot displays the 'Items Order' management interface. The sidebar menu on the left includes options like System Components, Stock Management, Purchasing, Items Order, Items Order Catalogs, Transfer Voucher, Transfer Receiving, Minimum and Maximum Range, Sales, System Configuration, and Points Of Sales. The main area shows a table of order records with columns for Number, Issued By, Deliver To, Order From, Status, and Date. The table contains six rows of data, with the first row being highlighted. The status of the orders varies, including Confirmed and Cancelled. The interface also features a search bar, a 'Deliver To' dropdown menu, and a 'Showing 1 to 100 of 198 rows' indicator.

Number	Issued By	Deliver To	Order From	Status	Date	
1	General Manager	Olia	Main warehouse	Confirmed	11/10/2021 11:07:00	 
1	General Manager	SITTEEN	Main warehouse	Confirmed	29/12/2021 13:44:00	 
1	General Manager	RAWDA	Main warehouse	Cancelled	02-02-2021 13:00:00	 
1	General Manager	Amman	Main warehouse	Confirmed	09/08/2021 14:36:00	 
1	General Manager	Jeddah Office	Main warehouse	Confirmed	20/01/2021 16:40:00	 
1	General Manager	Arqami Smart Technology	Main warehouse	Confirmed	21/10/2021 14:52:00	 

INVENTORY PURCHASE MANAGEMENT

Through the OPOS inventory management system, you can manage all inventory operations in a smooth manner with the availability of multiple levels of checks on entries and operations. Through the system, you can deal with the documentary cycle of purchase:

- ✓ Purchase request
- ✓ Purchase Order
- ✓ Receipt of purchase
- ✓ Purchase invoice

The screenshot displays the 'Items Order' management interface. The sidebar menu on the left includes options like System Components, Stock Management, Purchasing, Items Order, Items Order Catalogs, Transfer Voucher, Transfer Receiving, Minimum and Maximum Range, Sales, System Configuration, and Points Of Sales. The main content area shows a table of order records with columns for Number, Issued By, Deliver To, Order From, Status, and Date. The table contains six rows of data, with the first row being highlighted. The interface also includes a search bar, a 'Deliver To' dropdown menu, and a 'Showing 1 to 100 of 198 rows (searched from 498 total rows)' indicator.

FINANCE

The accounting system is fully integrated, where you can build a chart of accounts on an unlimited number of levels. You can also perform all accounting operations with many features that enable you to manage inputs and get reports in a very flexible way.

All operations that are made in the programme, such as inventory operations, cost operations, sales operations, and HR, are automatically created as entries. The accountants only check the validity of the entries before approving them.

It is also possible to create a fixed asset tree, and the asset depreciation operations are automatically managed through the programmed.

The screenshot displays a software interface for generating a Profit and Loss report. The top navigation bar includes the company name 'شركة مطعم القرية اليمنية' and the user role 'General Manager'. The main report area is titled 'Profit and Loss' and features several filter fields: 'Level' (set to 1), 'From Date', 'To Date', 'Store Category' (set to 'Please Select'), 'Branches', 'Year' (set to 2022), and a 'Budget' checkbox. A right-hand sidebar lists various system alerts and warnings, such as 'Document Alert', 'Salary Warnings', 'End of service specifier Warnings', 'Depreciation Warnings', 'Stock Management', 'Sales', 'Distribution expenses', 'Purchasing', 'Attendance Warning', and 'Deleted Entities'. The main report content area shows a header with 'Your Logo Here', the title 'Profit and Loss', and printing details: 'شركة مطعم القرية اليمنية', 'Printed by Admin', and 'Date 08/12/2022 09:44:24'. Below the header, there are fields for 'Branch', 'Activity', 'From Date', 'Year', and 'Account Type', with a 'Balance' field at the bottom. The footer of the report area includes the copyright notice '© 2015 Arqami'.

HR

The human resources system ... includes all operations related with employees, starting from the employee's card and details of his contract.. Through the system, we can make all procedures related with the employee:

- ✓ Employee Information
- ✓ Contract Details
- ✓ Employee Documentation & Reports
- ✓ Management and balance of vacations
- ✓ Penalties and deductions – Loans
- ✓ Attendance management
- ✓ Preparing the payroll process

CALL CENTER OPOS

Through the OPOS call center, you can receive and manage all customer orders received via the phone or delivery applications in one place, as the system automatically sends orders to all branches of your company the moment the order is executed without the need for additional programmes or auxiliary additions, as the role of the employee is limited to creating the invoice. And then he can follow up on the order and track its status (under preparation, under delivery, etc.).

ORDERS APPLICATION

Your customers can download your application from the application store, which is compatible with different operating systems for phones. The OPOS orders application contains a number of features, the most important of which is the presence of an area to display new products and offers. Also, through the application, you can send alerts to customers in the event that there is something you want to advertise. Your Customers can:

- ✓ Specify Type of Order
- ✓ Pay Directly through in-built payment methods
- ✓ View his previous orders as well as the points that have been obtained
- ✓ Pay Through Apple Pay, Visa, Master, Mada, loyalty points, or pay when receiving
- ✓ The customer can view his previous orders as well as the points \ that have been obtained

DINE-IN

NOW YOU CAN USE SUNMI DEVICES AS A PORTABLE POS WITH ARQAMI OPOS

ADVANTAGES:

Sunmi device is designed to be a mobile point of sale that is easy to use and the availability of a printer makes it a favorite for many.

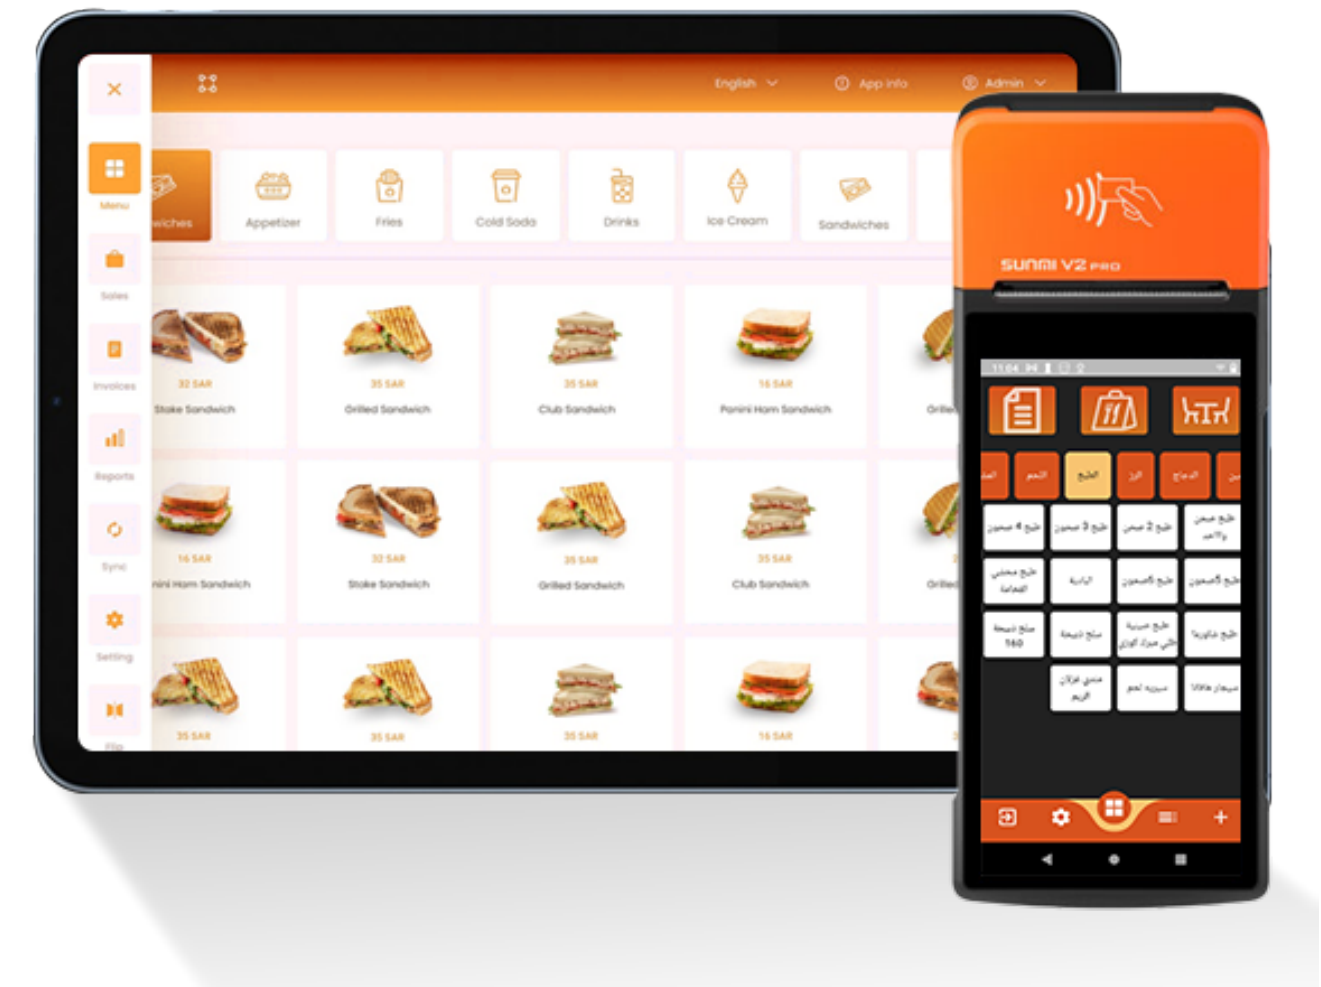

The Arqami Opos system works with the sunmi machines as a waiter device, where the waiter takes the customer's order directly from the table.

The ability to print the customer's account statement, close the invoice directly from the mobile device, and print the final invoice.

The possibility of making travel orders from the portable sunmi device.

It is directly linked to the preparation printers inside the kitchen. When executing any type of invoice, the order is printed inside the kitchen. Alert in the event that requests are printed inside the kitchen with the possibility of activating a setting to stop taking requests from the device in case there is a problem with printing resource invoices.

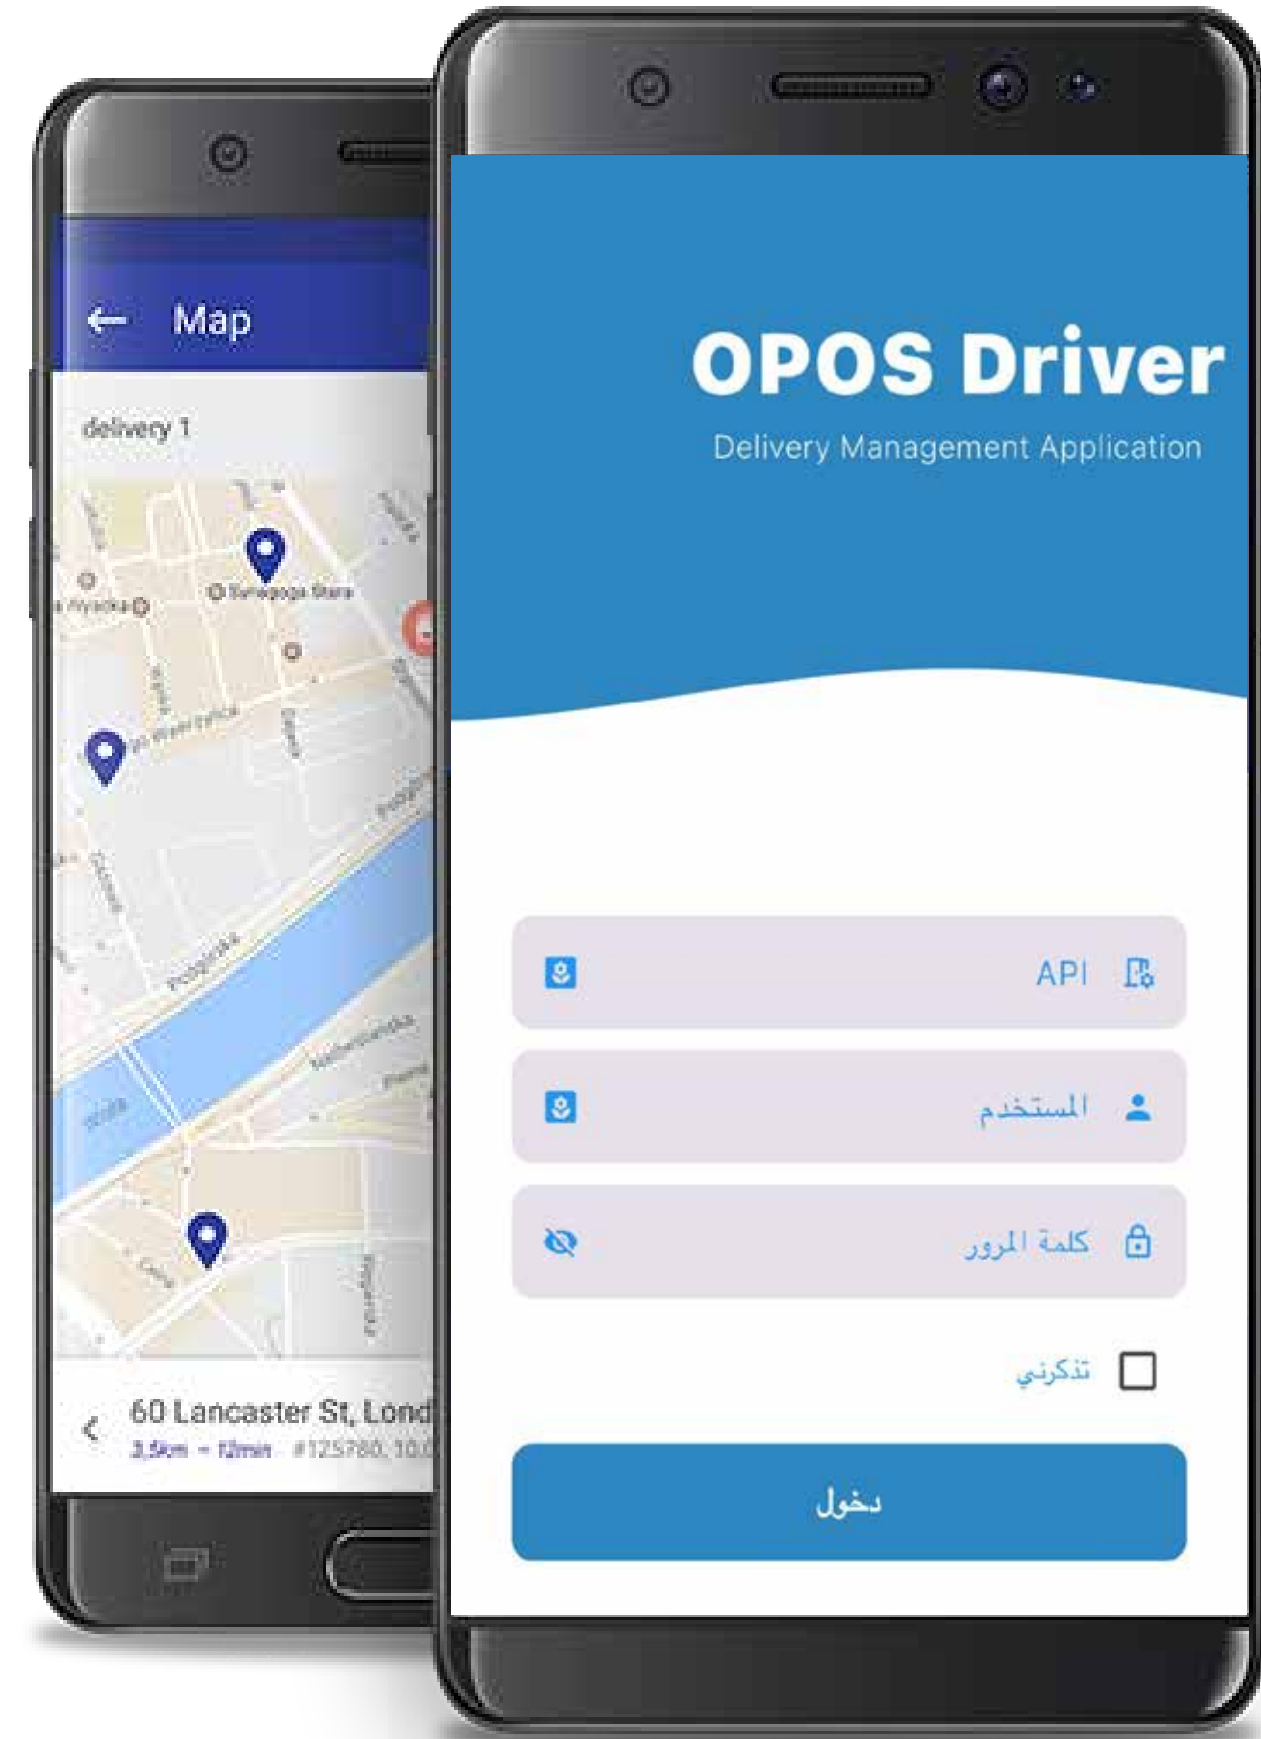

In the event that there is more than one hall for local requests, you can link each mobile device to specific halls, as only the halls associated with the device appear.

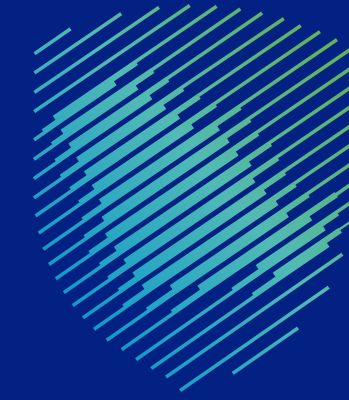

DRIVER APP

Manage your delivery using the drivers application, which controls the movement of drivers and monitors the stages of the order, starting from its exit from the restaurant until delivery to the customer.
